The Second Year Tutorial Centre - MC 4067

"Students Helping Students"

In the Fall Term 2012, the second year Tutorial Centre will provide a tutorial service for the courses MATH 235, MATH 237 and MATH 239. The Tutorial Centre will be staffed by graduate students.

The Tutorial Centre has two main purposes:

- Consultation of tutors about the course material
- Consultation of tutors about the problem sets

We ask that:

You do not use MC 4067 either as a social club or as a lunch room.

You do not do gaming in this room.

Please do not remove furniture from MC 4067.

Suggestions on how to benefit the most from the Math Faculty Tutorial Center learning resource:

- If you consult one of the tutors, please take your course notes with you so that your problem may be efficiently handled. Furthermore, if you request assistance with a particular problem please take your rough work with you in order to aid the tutor in identifying your difficulty.
- Please do not expect the tutors to solve the problems for you. Once you have been given a hint, you should work on your problem alone until you either complete it or need further assistance.

The Tutorial Centre will open on Monday September 17th, 2012. The hours will be posted outside MC 4067. Since the Algebra (MATH 235) assignments are due on Wednesdays, and Calculus (MATH 237) and Combinatorics (MATH 239) assignments are due on Fridays, know that Tuesday afternoons and Thursday afternoons are busy times at the tutorial center. So it is good idea to start your assignments early.

The schedule will look something like this:

ALGEBRA

TUTORS: To be announced

MATH 235: Monday and/or Tuesday afternoons

CALCULUS

TUTORS: To be announced

MATH 237: Wednesday and/or Thursday

COMBINATORICS

TUTORS: To be announced

MATH 239: Wednesday and Thursday

Problem Solving Sessions

A number of problem solving sessions, targeting specific topics, will be arranged during the term for the course MATH 235 and MATH 237. Information on the time and location of these tutorials will be announced in class by your instructor. These sessions are supplementary to the course. Math 239 also has a tutorial hour scheduled with the course.

Tutorial Center tutor schedules. You will find the schedules at

http://www.math.uwaterloo.ca/navigation/tutorial/

Links to the schedules will also be found on the UW D2L course webpage. A first draft of the schedules will be posted during the weekend of September 14th.

We wish you all good and productive Fall 2012 term!

Robert André Math Faculty Tutorial Centre coordinator MC 5166, ext. 36629 randre@uwaterloo.
